EDUCATION

Bachelor of Engineering in Computer Science and Business System, Thapar Institute of Engineering and Technology (GPA: 7.02 / 10.00) Aug '23 — Present
Patiala, Punjab

High School Diploma in Science - Mathematics Physics Chemistry, School of Eminence, Apr '22 — Mar '23
PheelKhana (GPA: 92.33 / 100.00) Patiala, Punjab

EXPERIENCE

Research Fellowship Aug '25 — Present
Ministry of Statistics

- Researched and developed an approach for estimating the monthly per-capita expenditure of households, grounding the methodology in strong engineering fundamentals and Explainable-AI.
- Engineered features for accurate estimation while structuring complex data systems across all levels of survey data, accounting 87 features over 120+ features.

Research Assistant Jan '25 — Present
Thapar Institute of Engineering and Technology

- Designed and optimized integrated CNN architectures for real-world image classification, leading collaborative experimentation with developers to surpass current accuracies and publishing 99.04 percent accuracy.
- Currently pursuing research and designing of algorithm for Neurological Diseases utilizing EEG signals as data sources, communicating findings to engineers and stakeholders to drive innovation.

PROJECTS

VidyAI

- Built an AI-powered academic assistant using LLMs and RAG architecture to help students navigate curriculum data, external references, and university library resources through a single intelligent interface, applying strong software fundamentals to connect complex systems and data flows.
- Delivers on-demand content summarization, contextual query answering, and auto-generated quizzes – reducing study friction and enabling personalized learning from multi-source knowledge bases through experimentation and innovation grounded in clear communication.

GovIntel.AI

- Developed a Streamlit-based multi-label classifier for National Industrial Classification (NIC) codes, powered by LLMs, to modernize how government officials and businesses handle new-age industry categorization, collaborating with developers to structure data systems and process logic.
- Significantly reduced manual lookup time for NIC code identification, making industrial classification faster, more accurate, and accessible to non-technical stakeholders.

VidhiLM

- Engineered an AI-powered legal assistant on GCP to tackle query resolution, case classification, and actionable legal insight generation across IPC, CrPC, and Constitutional domains.
- Enabled quick, accurate legal guidance for individuals and businesses – democratizing access to complex legal frameworks without the need for specialist consultation for every query.

TECHNICAL SKILLS

Relevant Skills ETRM, Listen, Collaboration, Foundation

Core AI/ML Python, Scikit-learn, PyTorch, Hugging Face, Machine Learning Algorithms (XGBoost, Decision trees, Random Forest, etc.), Neural Networks, LLMs, RAG, Vector Databases, Explainable AI

Cloud & Deployment Google Cloud Platform, Flask, Streamlit

Data & Databases MongoDB, MySQL

Frontend HTML, CSS, JavaScript, React.js

EXTRA CURRICULAR – ACHIEVEMENTS / AWARDS

- First Runner Up in HackSecure X International Hackathon 2026, organized by the University of South Florida – 2026
- Bagged 4th Position at IIT Gandhinagar Hack The Future 2025, organized by the Ministry of Statistics – 2025
- Served as Control Engineer at the Mechatronics and Robotics Society (2024-2026)
- Served as Overall Student Coordinator at the Center of Excellence - Data Science and AI (2025-2026)
